

## **A Drone Car**

### **What I would like to see made in 2021**

Inventions have been part and parcel of mankind ever since the stone age. Telephones, Radio, Aeroplanes, Televisions, Computers, Mobile phones, Robots, Drones and ... ? My answer is “Drone Cars”. The Drone Car I envision will have all the features of a drone, and added to that, it can transport people. Drone cars will be an unavoidable asset for mankind in all walks of life.

### **What are Drones?**

Drones are unpiloted aircrafts or spacecrafts. They are flying robots that are controlled using remote controls and operate autonomously through software controlled flight plans in their embedded systems. They work in conjunction with onboard sensors and GPS and cannot function on their own.

### **Drone Cars - Technology used**

These wondrous Drone cars use the parachute technology. Parachute technology has always been used to control the movement of an object. Powered parachutes have helped in flying and landing operations. It helps prevent a landing object from crashing by reducing its speed to a safe limit.

### **Drone Cars - Uses**

#### **During pandemic**

Drone Cars can be used to transport medicines and medical staff to places that are too remote to be reached by road and too small to be reached by aircrafts or helicopters. Many deaths can be

avoided if we are able to reach the people living in these remote places where there is little to no medical facilities available.

### **During Evacuations**

Drone Cars can be used by rescue personnel to evacuate civilians in danger during a fire or flood without risking their own lives.

### **For Wildlife conservation**

Drone Cars can be used to transport veterinarians to locations where animals are in danger in a speedy manner compared to driving.

### **Day to Day Life**

Are you always late for work or appointments. If so, Drone Cars are your solution. Not only can it get you to your work and appointments on time, but also with less pollution.

### **Conclusion**

Sky's the limit for the advancement of the Drone era. But, drone technology should not fall into the wrong hands. As yet another weapon to annihilate mankind. I strongly believe that the Drone Car will enhance our world and make it a better place for all of us and future generations. Hopefully you agree with me. Always remember this quote said by Albert Einstein, "Necessity is the mother of all invention."
